

9.1.1. Count Vowels in a String - 1

Aim: Write a program that takes a string as input and prints the total count of vowels in that string. Consider both uppercase and lowercase.

Algorithm:

1. Start
2. Read string st
3. Set count = 0
4. Traverse each character of string
5. If character is vowel $\rightarrow$ count = count + 1
6. Print count
7. Stop

9.1.1. Count Vowels In a String - 1

02:13

🔍🌙📄🔗-

Write a program that takes a string as input and prints the total count of vowels in that string. Consider both uppercase and lowercase.

Input Format:

- A single line contains a string that may contain letters, numbers, and punctuation.

Output Format:

- An integer representing the total number of vowels in the input string.

Sample Test Cases+

vowel_co...

Submit

1st = input()
count = 0
for i in st:
if i in ('a','e','i','o','u','A','E','I','O','U'):
count += 1
print(count)

Average time
0.002 s
2.17 ms

Maximum time
0.004 s
4.00 ms

2 out of 2 shown test case(s) passed
4 out of 4 hidden test case(s) passed

Test case 14 msDebug

Expected output
Hello World!
3

Actual output
Hello World!
3

Test case 22 ms
