

9.1.2. Palindrome or Not

AIM: Write a Python program to take a string as input and check whether the given string is a palindrome or not. A palindrome is a string that reads the same forwards and backward.

ALGORITHM:

- 1.Start
- 2.Read string st
- 3.Find length n
- 4.Set flag = True
- 5.Compare characters from start and end
- 6.If mismatch → flag = False
- 7.If flag true → Palindrome else Not Palindrome
- 8.Stop

9.1.2. Palindrome or Not08:49

Write a Python program to take a string as input and check whether the given string is a palindrome or not. A palindrome is a string that reads the same forwards and backward.

Input Format:

A single line of input contains a string

Output Format:

If the input string is a palindrome, print "Palindrome", otherwise print "Not a Palindrome"

Sample Test Cases

Test case 1

racecar

Palindrome

Test case 2

beautiful

Not a Palindrome

palindro...

```
1 inp = input()
2 length = len(inp)
3 flag = True
4 for st in range(length):
5     if inp[st] != inp[length - 1 - st]:
6         flag = False
7
8 if flag:
9     print("Palindrome")
10 else:
11     print("Not a Palindrome")
```
