

10.1.1. Remove Punctuations from a String

AIM: Write a Python program to remove all punctuation marks from a given string and print the resulting string.

ALGORITHM:

Start

2.Read string st

3.Set new_str = ""

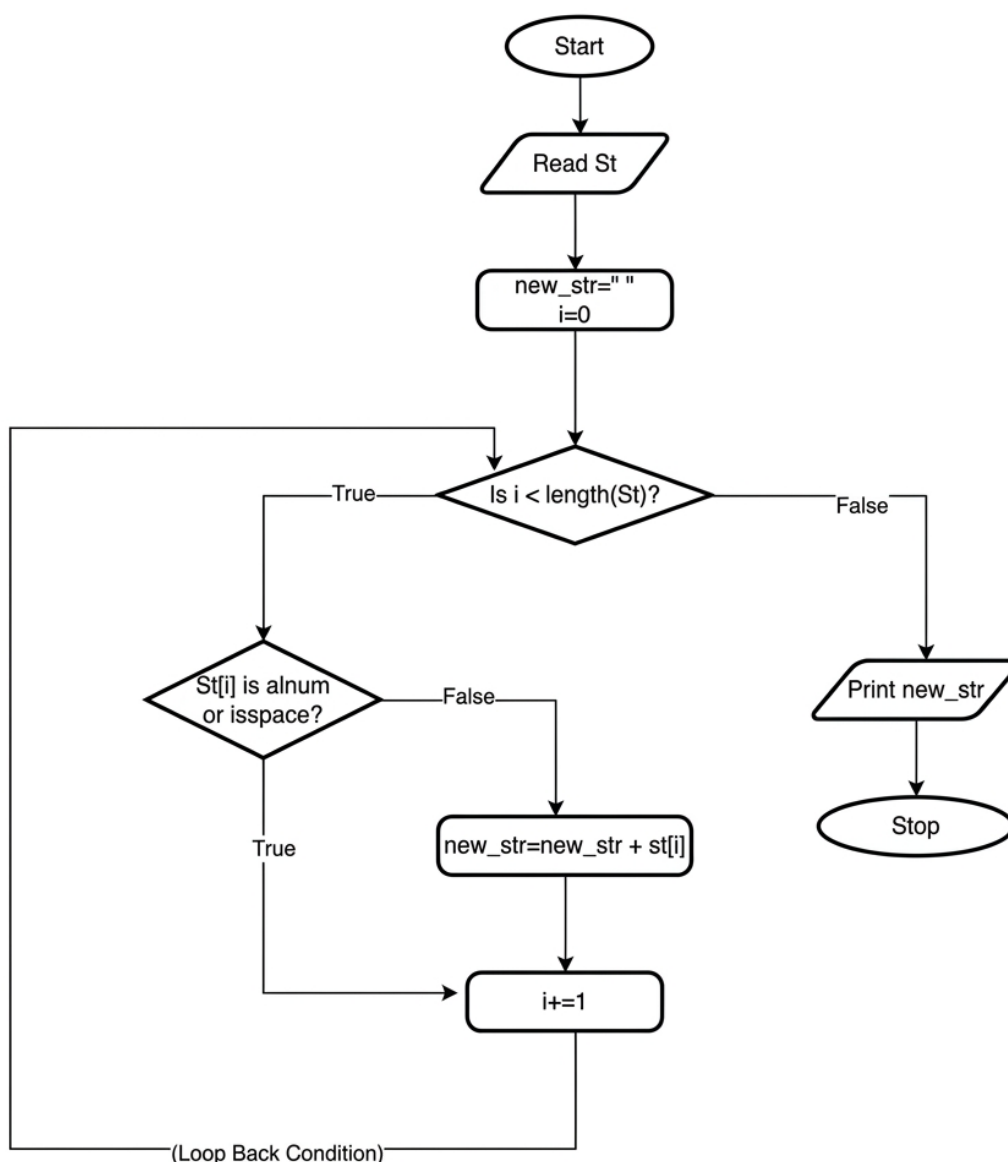

4.Traverse each character

5.If character is alphanumeric or space → add to new_str

6.Print new_str

7.Stop

FLOWCHART

EXECUTION

10.1.1. Remove Punctuations from a String

Write a Python program to remove all punctuation marks from a given string and print the resulting string.

Punctuation marks are special characters that are not letters, digits, or spaces.

The program should keep all letters (uppercase and lowercase), digits, and spaces, but remove all punctuation marks.

Input Format:

- Single line contains a string (may include letters, digits, spaces, and punctuation marks).

Output Format:

- Print the string after removing all punctuation marks.

Note:

- Refer to sample test cases for better understanding.

Sample Test Cases

+

removeP...

```
1 st = input()
2 new_st = ""
3
4 for ch in st:
5     if ch.isalnum() or ch.isspace():
6         new_st = new_st + ch
7
8 print(new_st)
```

Average time
0.002 s
1.50 ms

Maximum time
0.004 s
4.00 ms

4 out of 4 shown test case(s) passed
4 out of 4 hidden test case(s) passed

Test case 1 4 ms Debug

Expected output

Hello, World!

Hello World

Actual output

Hello, World!

Hello World

Test case 2 2 ms

Test case 3 4 ms
